Meet the family!

Dad – AKA – Gordon James

Gordon grew up in the church but walked away from the Christian faith in his late teens. Gordon often had questions concerning science and the Bible, but the church leadership could never answer his questions concerning the evolutionary view of earth history. Gordon went on to University with a focus on mechanical engineering. During his freshmen year Gordon's roommate shared a copy of Creation Magazine with him and Gordon realized he could find answers to the biblical and scientific questions that had been casting shadows on his faith in Christ. Gordon now works as a robotics engineer that models new technology after design features found in living creatures.

Mom – AKA – Katherine Ann James

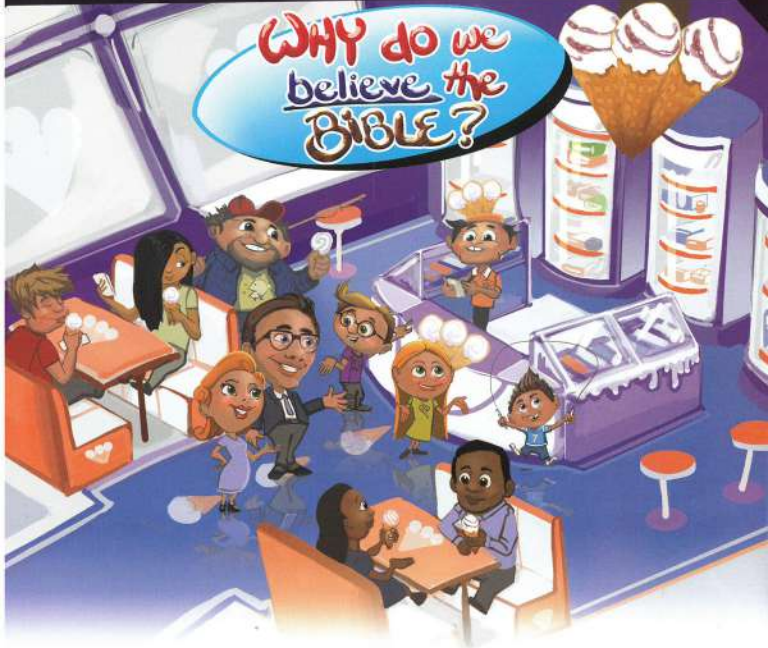

Katie and Gordon were introduced by a mutual friend during a university Bible study. Unlike Gordon, Katie's family never attend church. Her Mother and Father worked in the medical field and raised Katie and her siblings to understand that science had disproved that Christianity was simply based on myths and fairytales. At the age of 17 Katie was invited to attend a Creation conference at her girlfriend's church. She was amazed to hear that history and real science actually confirmed the Truth about the Bible. Since that time she has attended church and has shown her whole family that the Bible's history is true. Katie has a degree in Literature and writes Bible based curriculums for school aged children.

Isabel – 12 YEARS OLD

Isabel is a 'free spirit'. She plays the guitar and has a very inquisitive mind. She can't remember a time she hasn't believed in Jesus, and she loves learning more about the Bible.

WHY do we believe the BIBLE?

The James family loves the Lord, and their three children often have questions about things they learn at church, or things they see on TV or read in books. They know they can always ask their Mom and Dad any questions they ve.

Last Wednesday night, the pastor talked about why s important to trust God's word in all areas of life. tting in the van after church, Wesley said, "I believe e Bible, but I have a lot of questions about why!" abel said, "Let's ask Mom and Dad, maybe they will : us have some ice cream after dinner because we are paying attention during Bible study!"

Dad, overhearing the conversation said, "Yes, let's ve some ice cream and talk." "Woohoo!" the kids outed together. Soon, Ice cream in hand, the kids arted bombarding Mom and Dad with questions.

Q: Why do we believe the Bible?

A: God is our Father in Heaven and He loves to communicate with his people. God tells us what His will is, and we can understand it because he is a God of order and logic. That's what the Bible is for. It's a special book written over a long period of time by men to whom God spoke. Lots of people have questions about the Bible, though, so let's answer some of the most common ones.

Q: Did God write the Bible, or did men?

A: God wrote a very special part of the Bible, the Ten Commandments (found in Exodus 20), directly onto tablets of stone (Exodus 31:18). But most of it He told men to write. Sometimes He told them exactly what to write, and other times God moved the heart and mind of the authors to write things down. We can

Life in the ICE AGE!

Simon peered out the frosty window. "Yay, snow! Can we go out, please?" Mom was ready with coats and mittens for everyone. Dad came downstairs, "Because the roads are blocked with snow, the office isn't opening today! It looks like we all get a snow day!" Isabella added, "If we lived during the Ice Age you would never have to go to the office." Dad replied, "Well, we know people lived through the Ice Age and I would imagine they had a lot of work to do."

Was there really an Ice Age?

Evolutionists say that there have been many Ice Ages throughout history. Actually, there was only one Ice

Age, and it was caused by Noah's Flood. Though the Flood lasted only a year, its effects on the climate lasted centuries! Hot underground water was a major source of Flood waters, so even after they retreated back into the oceans, the water stayed warm. Also, massive volcanic eruptions would have poured ash into the air, which blocked out much sunlight over the land. So the land would have been much colder. Then some of the warm water evaporated into clouds, which then dropped much snow over the cold land. Over centuries, this packed into huge ice sheets covering a third of earth's land. We can even see the effects the snow and ice had on the earth today; the ice at the North and South Poles is left over from this.
